

EDITORIAL PREFACE

On March 18 and 19, 1993, an International Symposium on Epistemic Logic was held at the University of Liège (Faculté de Philosophie et Lettres, Séminaire de Logique et d'Epistémologie). Its main organisers were Professors Paul Gochet, former editor of this journal, and Jacques Dubucs.

Apart from energetic effort, the Symposium was made possible by the generous financial support of the following organisations:

- the C.N.R.S (Centre National de la Recherche Scientifique) of France,
- the F.N.R.S (Fonds National de la Recherche Scientifique) of Belgium,
- the C.N.R.L.-N.C.N.L. (Centre National de Recherches de Logique - Nationaal Centrum voor Navorsingen in de Logica),
- the University of Liège,
- the Centre d'Etudes Québécoises.

This volume of *Logique et Analyse* brings together almost all of the papers presented at this International Symposium. If any papers are missing, this was done on request of its author. It gives us great pleasure, first, to be able to publish these papers, and, secondly, to do so within a time interval of (more or less) one year. Although no record in itself, it does guarantee the actuality of the materials presented here. We thank the organisers to have presented these materials to us for publication.

There is no need to present here an overview of the contents of this volume. Johan van Benthem's paper provides an excellent introduction to the theme of epistemic logic and, more generally, I am quite confident that the reader will be able to judge for him/herself the high quality of these contributions.
